EDRS 821: Advanced Applications of Quantitative Methods (3 credits)

Fall 2017 Wed.  4:30- 7:10 PM   Thompson Hall L014

Instructor: Angela Miller, Ph.D.
Office: West Building Room 2007
Office Hours: Wednesdays 3 – 4 pm and by appointment (please email).
Email address: amille35@gmu.edu

Prerequisite: Successful completion of EDRS 811 or the equivalent (knowledge of univariate statistics including ANOVA models).

Catalog Description: Advanced study of applications of quantitative methods in educational research, reinforcing and building on concepts and skills acquired in EDRS 811. Uses modular approach, and provides advanced study of techniques appropriate to survey research, group-experimental and quasi-experimental research, selected multivariate procedures and factor analysis, and quantitative synthesis (meta-analysis) of research. Combines reading assignments, critiques, and discussion of relevant journal articles; and application activities.

Course Description: This course will provide advanced study of applications of quantitative methods in the practice of educational research and will reinforce and build upon concepts and skills acquired in EDRS 811. It will employ a modular approach and will contain advanced study of techniques appropriate to analysis of data from tests and surveys; group-experimental and quasi-experimental design; selected multivariate procedures and factor analysis. Students will learn through a combination of text reading assignments, critical analysis of professional journal articles, and hands-on experience in using a computer program for data analysis, and application activities. Students will be expected to identify and report on quantitative methods used in published research, to analyze data using the Statistical Package for Social Sciences (SPSS), and to provide written reports of methodology and results.

Course goals: This course is a one-semester introduction to several widely used multiple regression (MR) and multivariate statistical methods. By the end of the semester, it is expected that you will be able to:

- Demonstrate a conceptual understanding of multiple regression with mediators and moderators and generalized linear modeling (e.g., logistic regression) as evidenced by your ability to select and justify the statistic that is appropriate to test a particular hypothesis, explain what the procedure is accomplishing and the logic underlying the given procedure.
- Explain what is meant by multivariate statistical techniques and demonstrate the ability to use multiple techniques that are introduced in this class.
- Explain the assumptions of the above analyses and make recommendations when assumptions are violated.
- Conduct all of the statistical techniques noted above using SPSS software, including testing the assumptions of the technique, interpret the results of the SPSS output and write the results in APA publication style.
Format: The class sessions will include both lecture and hands-on computer work.

Required Materials:

(2) Access to SPSS software. There are computer labs on campus that provide access to SPSS. You can access SPSS software through GMU’s virtual computer library at www.vcl.gmu.edu. Information about how to use the virtual computer library is available at http://itservices.gmu.edu/services/view-service.cfm?customel_dataPageID_4609=5689. It is the student’s responsibility to ensure access to SPSS outside of class time as there will not be sufficient time in class to complete required assignments.

(3) There are also required articles/book chapters included on the reference list at the end of this document which will be posted on blackboard and/or available online through the library portal.

Recommended Resources:

Class Preparation: Information on course assignments, weekly quizzes, and notes for class lectures are available on the course blackboard site. Occasionally, there will also be short video lectures posted on blackboard as introductions to the concepts we will be studying—these are intended to precede your reading of the assigned chapters and/or articles and help situate your reading.

Class Attendance & Participation: Students are expected to come to class on time, complete assignments, and participate in class discussions.

My Teaching Philosophy (in a nutshell) and Expectations
Many people tend to think of statistics as a static and “cut and dry” field when, in fact, it is neither. Advances in computing have enabled the rapid development of more sophisticated modeling tools. There is no way that you will ever know and understand all of them. What you need to understand are the basic assumptions underlying different models, how to select among them, and where to go to get information to learn more if you need something new.

As doctoral students, my main goal for you is to help you become expert learners. It is not realistic for me to be your only source of information, nor is it a viable learning model for the scientists and researchers that you are becoming. Make use of the many resources that are easily available on the web and work with one another.
The most important thing you can bring with you to class is a willingness to try to conceptually understand the material. *Please be active--ask questions and participate.* Outside of class, remember that reading statistical information takes a long time, and even when you read slowly and deliberately, you will need to go back and revisit it over and over. Many people find that this is not easy material; you should accept struggles as a normal part of the learning process.

**ASSESSMENT:**

**Online Quizzes (5%):** For each topic there will be a short quiz posted on Blackboard. The quizzes are composed of short answer and multiple choice items which will cover the basic concepts presented in class and in the textbook. Quizzes are timed (usually 25 minutes) and must be completed during the specified time period. These quizzes are designed to provide you (and me) with feedback about your course progress. Your quiz score cannot lower your overall course grade. *Please take the quiz as soon after class as possible.*

**APA Style Exercise (5%):** In weeks one and two of the class, students are expected to review the reporting standards for statistics in APA style and complete a short assignment covering the standards.

**Annotated Analysis (20%):** Each week you will work with data to replicate class or textbook analyses and/or run new analyses in a small group (2-3 students per group). The exercise may also include conceptual questions about the method to help you gain conceptual understanding as you work through the exercises. You may work together or individually on running the analysis; however your responses to the questions and annotations should be a collaborative effort. Your group will upload your annotated output (please cut and paste relevant output to Word) and responses on the Bb site. You will make corrections to your analyses before writing up and submitting the results in APA format.

**Full Write Up of Regression Results (10%):** For the first multiple regression assignment you will write a complete “dissertation style” methods and results section in correct APA format including: (1) data cleaning (2) testing of appropriate assumptions, (3) inclusion of any necessary preliminary descriptive statistics and tables (4) results of hypotheses tests, and (4) interpretation of results.

**Reading/Critiquing and Writing Results (20%):** For each type of analysis (except Multiple Regression-see above) that we will learn in this class, you will either write a results section in correct APA format including: results of hypotheses tests and interpretation of results similar to what would be found in a published research article OR read and comment on a published results section (from a peer-reviewed journal in your field) using the type of analyses we are studying. It is your choice which methods to critique and which ones to write-up formally but you must have 3 of each kind of presentation.

*Reading & Critiquing Results (10%):* You can learn a lot about the methods we are studying by reading about how researchers in your field use regression and multivariate methods. For 3 of the topics you will need to find research articles in your area of interest.
that use one of the topics as the primary analysis method and review carefully how the results are presented. You will submit a short (1-2 page commentary/critique) on the results section. Please upload both the article and your critique of the analysis application and results presentation.

‘Article Style’ Write Up of Results (10%): These results are based on the analysis from your groups work on 3 of the topics. Results are submitted individually and even though they are based on the group SPSS output they should reflect your individual interpretation and presentation. Duplicate work is considered plagiarism and will receive a score of 0.

Exams (20% each): The two exams will cover the material from the class and textbook and include short answer questions as well as interpretation of SPSS output.

GRADING SCALE:
Grades will be assigned based on the following:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>98-100%</td>
</tr>
<tr>
<td>A</td>
<td>93-100%</td>
</tr>
<tr>
<td>A-</td>
<td>90-92%</td>
</tr>
<tr>
<td>B+</td>
<td>88-89%</td>
</tr>
<tr>
<td>B</td>
<td>83-87%</td>
</tr>
<tr>
<td>B-</td>
<td>80-82%</td>
</tr>
<tr>
<td>C</td>
<td>70-79%</td>
</tr>
<tr>
<td>F</td>
<td>below 70%</td>
</tr>
</tbody>
</table>

Final grades are based in the assessments described above. “Extra credit” is not available.

Late Assignments: As a general rule, late assignments will not be accepted. If you believe you have EXCEPTIONAL circumstances and wish to negotiate to have extra time to complete course work, you must discuss this with me before the day the assignment is due. (Negotiating means that you will be sacrificing a portion, perhaps substantial, of your grade for extra time).

COLLEGE OF EDUCATION AND HUMAN DEVELOPMENT
STATEMENT OF EXPECTATIONS:

Student Expectations:
- Students must adhere to the guidelines of the George Mason University Honor Code [See http://oai.gmu.edu/the-mason-honor-code/].
- Students must follow the university policy for Responsible Use of Computing [See http://universitypolicy.gmu.edu/policies/responsible-use-of-computing/].
- Students with disabilities who seek accommodations in a course must be registered with George Mason University Disability Services. Approved accommodations will begin at the time the written letter from Disability Services is received by the instructor (see http://ods.gmu.edu/).
- Students are responsible for the content of university communications sent to their George Mason University email account and are required to activate their account and check it regularly. All communication from the university, college, school, and program will be sent to students solely through their Mason email account.
- Students must follow the university policy stating that all sound emitting devices shall be silenced during class unless otherwise authorized by the instructor.
- Students are expected to exhibit professional behaviors and dispositions at all times.
Campus Resources

- Support for submission of assignments to Tk20 should be directed to tk20help@gmu.edu or https://cehd.gmu.edu/api/tk20. Questions or concerns regarding use of Blackboard should be directed to http://coursessupport.gmu.edu.
- The George Mason University Counseling and Psychological Services (CAPS) staff consists of professional counseling and clinical psychologists, social workers, and counselors who offer a wide range of services (e.g., individual and group counseling, workshops and outreach programs) to enhance students’ personal experience and academic performance [See http://caps.gmu.edu/]
- The George Mason University Writing Center staff provides a variety of resources and services (e.g., tutoring, workshops, writing guides, handbooks) intended to support students as they work to construct and share knowledge through writing [See http://writingcenter.gmu.edu/]
- The George Mason University Office of Student Support staff helps students negotiate life situations by connecting them with appropriate campus and off-campus resources. Students in need of these services may contact the office by phone (703-993-5376). Concerned students, faculty and staff may also make a referral to express concern for the safety or well-being of a Mason student or the community by going to http://studentsupport.gmu.edu/, and the OSS staff will follow up with the student.
- For additional information on the College of Education and Human Development, Graduate School of Education, please visit our website [See http://gse.gmu.edu/].

Core Values Commitment

The College of Education & Human Development is committed to collaboration, ethical leadership, innovation, research-based practice, and social justice. Students are expected to adhere to these principles: http://cehd.gmu.edu/values/.
## Tentative Schedule
