

COURSE SYLLABUS

Fall 2008

**GEORGE MASON UNIVERSITY
COLLEGE OF EDUCATION AND HUMAN DEVELOPMENT
EDUCATIONAL PSYCHOLOGY PROGRAM**

**EDRS 631
Program Evaluation**

PROFESSOR:

Name: Charles L. Thomas, Ph.D.
Office phone 703-993-3137
Office location 2006 West Bldg
Email address cthomas@gmu.edu

COURSE DESCRIPTION:

- A. Prerequisites:
None, but EDRS 590 or equivalent recommended.

- B. Catalog Description: EDRS 631 Program Evaluation (3:3:0). Introduces students to perspectives of existing and emerging issues, theories, and models of program evaluation.

- C. Course Description: This course is designed to provide an introduction to the practical, theoretical, and ethical foundations of program evaluation. Although the concepts, principles, and skills will be studied in the context of education, they apply to most program contexts (e.g., state and federal agencies, community health, nonprofits, etc.). Program evaluation will be examined both as a profession as well as a field of empirical inquiry.

NATURE OF COURSE DELIVERY:

Independent Study and Formal Classroom delivery venues are available. For the latter, lectures, small group and whole class discussions and field studies are the primary modes of instruction. Students will engage in mini-evaluation studies to acquire hands-on knowledge of essential evaluation practices. When available, guest speakers will enrich the course by sharing their experiences in program evaluation and giving students insight into the world of the professional evaluator.

STUDENT OUTCOMES:

At the end of the course students will be able to:

1. Understand the nature of program evaluation and how it differs from social science research;
2. Apply standards of good practice and ethics in planning and conducting program evaluations;
3. Distinguish among the major models and methods of conducting program evaluation;
4. Independently conduct preliminary and process program evaluation studies;
5. Understand the cultural and political implications of program evaluation

PROFESSIONAL STANDARDS:

The five following guiding principles developed by the American Evaluation Association will be stressed during the course:

A. As a Profession:

1. Systematic Inquiry: Evaluators conduct systematic, data-based inquiries about whatever is being evaluated.
2. Competence: Evaluators provide competent performance to stakeholders.
3. Integrity/Honesty: Evaluators ensure the honesty and integrity of the entire evaluation process.
4. Respect for People: Evaluators respect the security, dignity and self-worth of the respondents, program participants, clients, and other stakeholders with whom they interact.
5. Responsibilities for General and Public Welfare: Evaluators articulate and take into account the diversity of interests and values that may be related to the general and public welfare.¹

B. As a set of methods of Inquiry:

Students will examine in depth the Program Evaluation Standards developed by the Joint Committee on Standards (1994). A summary of the Program Standards are appended to this syllabus.

REQUIRED TEXTBOOK:

Fitzpatrick, J.L., Sanders, J. R., and Worthen, B. (2004). Program evaluation. Alternative approaches and practical guidelines. 3rd Ed. Saddle Back, NJ: Pearson.

REQUIRED READNGS:

Fredericks, K.A., Michael Deegan, M and Carman, J.G. (2008) Using system dynamics

COURSE REQUIREMENTS, PERFORMANCE-BASED ASSESSMENT, AND EVALUATION CRITERIA:

A. Requirements

1) Concept Paper (4-5 pages)

The course examines alternative perspectives and approaches to evaluation. After careful reading and class discussions, students are to select one approach that is personally relevant or interesting for the focus of the paper. The paper should describe:

- a. The selected approach that includes an update of its use in a given field such as education, community health, etc. The update will include the citations and perspectives of 2-3 authors in articles that have been written since the publication of the required textbook.
- b. The reasons why the approach is relevant or of interest. The student may draw on both personal philosophy as well as practical experiences.
- c. Reflections on possible ethical issues that may emerge using the selected approach.

2) Field Studies: Students are required to conduct one field-based

mini-evaluation study during the semester. The field-based study may be associated with projects or programs on campus or a project of the students' own choosing. The mini-evaluation may be selected from the following options:²

- a. Needs Assessment: *Is there a need for the program?*
Students may seek to find evidence that the program is indeed meeting a social need.
 - b. Evaluability Assessment: *Has the program sufficiently matured to the point that an evaluation is justified or possible?* For example, is there consensus among stake holders regarding the purpose of the program?
 - c. Program Theory: *What are the tacit assumptions expressed by program planners and staff about the connections between their actions and intended short-term and long-term outcomes?*
 - d. Formative or Process Evaluation: *What is going on in the program, and how can program features be improved?*
 - e. Proposed Summative Evaluation: *Has the program met its short-term outcome goals?*
- 3) Debriefing Reports: Students will provide a debriefing of their progress with the field study through oral presentations to the class and a 2-3 page paper to the Instructor for feedback.
 - 4) Active Participation in Progress Reporting: As follow-up to classroom feedback to presenters, each student will post a summary of their suggestions and observations to the presenters on Blackboard by the next week following the presentations.
 - 5) Final Report from the Mini-study. The final project is a report (10-15 pages) that summarizes the results of the mini-study. It should be responsive to the feedback obtained from fellow students and the Instructor.

B. Performance-Based Assessments

Grades will be based on performance as evidenced in the quality of work on the:

- 1) Concept Paper (5 pages max)
- 2) Conduct and performance in the field work
- 3) Participation in providing feedback to classmates and briefing paper to Instructor related to progress
- 4) Final Report on Field Experience

C. Grading Criteria and Weights

- 1) Weights for the products are:
 - a. Concept Paper (30 points).
 - b. Participation in field work: 30 points
 - c. Feedback Participation: 10 points
 - d. Final Paper: 30 points

² See Appendix B for examples of study questions that can be selected for the mini-study.

2) Points are cumulative and letter grades are based on the percentage of the maximum number of points (100) attained.

D. Grading Scale A = 95-100%; A - = 92-94%; B+ = 88 -91%; B = 84 – 87%; B- = 81-85%; C = 75-80%; D = 70-74%; F = < 70%

COLLEGE OF EDUCATION AND HUMAN DEVELOPMENT STATEMENT OF EXPECTATIONS

The Graduate School of Education (GSE) expects that all students abide by the following:

Students are expected to exhibit professional behavior and dispositions. See gse.gmu.edu for a listing of these dispositions.

Students must follow the guidelines of the University Honor Code. See http://www.gmu.edu/catalog/apolicies/#TOC_H12 for the full honor code.

Students must agree to abide by the university policy for Responsible Use of Computing. See <http://mail.gmu.edu> and click on Responsible Use of Computing at the bottom of the screen.

Students with disabilities who seek accommodations in a course must be registered with the GMU Disability Resource Center (DRC) and inform the instructor, in writing, at the beginning of the semester. See www.gmu.edu/student/drc or call 703-993-2474 to access the DRC.

PROPOSED CLASS SCHEDULE³

Date	Topic/Learning Experiences	Preparatory Readings and Assignments
Aug 28	Orientation and Introduction To Basic Concept of Program Evaluation	
September 4	NO CLASS: INDEPENDENT STUDY	<i>FSW(Fitzpatrick, Sanders, & Worthen (FSW), Part I Chapters 1-3 (FSW, I:1-3)</i>
September 11	What is Valued in Evaluation? Alternative Approaches and Perspectives Objectives-Oriented Perspectives	<i>FSW, II:4</i>
September 18	Management Evaluation Perspectives	<i>FSW,II :5</i>
September 25	Consumer-Oriented Evaluation Perspectives	<i>FSW,II:6</i>
October 2	Expertise-Oriented Evaluation Perspectives	<i>FSW,II:7</i>
October 9	Participant-Oriented Perspectives Summary and Analysis of Perspectives	<i>FSW,II:8-9</i> <i>Mertens article</i>
October 16	Practical Guidelines: Clarifying and Setting Boundaries • CONCEPT PAPER DUE	<i>FSW,III:10-11</i> <i>Williams articles (2)</i>
October 23	Practical Guidelines: • Identifying and Selection Evaluative Questions and Criteria • Planning to Conduct the Evaluation	<i>FSW,III:12-13</i> <i>Fredericks et al article</i> <i>Innovation Network Workbook</i>
October 30	Practical Guidelines: Political, Ethical, and Interpersonal Issues in Evaluation	<i>FSW, IV:17</i> <i>Program Standards & Principles (IV:18, pp 444-452)</i> <i>See also Syllabus, appendices B & C</i> <i>Thomas article</i> <i>Smith article</i>
November 6	Practical Guidelines: Collecting Evaluation Information	<i>FSW, V:14-15</i>
November 13	Practical Guidelines: Reporting and Using Evaluation Information	<i>FSW, V: 16</i>
November 20	Meta- & Multi-site evaluations	<i>FSW,IV: 18, pp 452-460, V: 19</i>

³ This schedule is tentative until dates for speakers and the logistics for field study activities have been finalized. It does provide the sequence for readings and lecture topics.

December 4	Evaluation In Corporate and Nonprofit Settings & The Future of Evaluation	<i>FSW, V: 20-21</i>
December 11	<ul style="list-style-type: none">• Presentations of Field Study & Submitting Reports for Grading	

APPENDIX A

The Program Evaluation Standards

Summary of the Standards

VII. Utility Standards

The utility standards are intended to ensure that an evaluation will serve the information needs of intended users.

U1 Stakeholder Identification--Persons involved in or affected by the evaluation should be identified, so that their needs can be addressed.

U2 Evaluator Credibility--The persons conducting the evaluation should be both trustworthy and competent to perform the evaluation, so that the evaluation findings achieve maximum credibility and acceptance.

U3 Information Scope and Selection--Information collected should be broadly selected to address pertinent questions about the program and be responsive to the needs and interests of clients and other specified stakeholders.

U4 Values Identification--The perspectives, procedures, and rationale used to interpret the findings should be carefully described, so that the bases for value judgments are clear.

U5 Report Clarity--Evaluation reports should clearly describe the program being evaluated, including its context, and the purposes, procedures, and findings of the evaluation, so that essential information is provided and easily understood.

U6 Report Timeliness and Dissemination--Significant interim findings and evaluation reports should be disseminated to intended users, so that they can be used in a timely fashion.

U7 Evaluation Impact--Evaluations should be planned, conducted, and reported in ways that encourage follow-through by stakeholders, so that the likelihood that the evaluation will be used is increased.

VIII. Feasibility Standards

The feasibility standards are intended to ensure that an evaluation will be realistic, prudent, diplomatic, and frugal.

F1 Practical Procedures--The evaluation procedures should be practical, to keep disruption to a minimum while needed information is obtained.

F2 Political Viability--The evaluation should be planned and conducted with anticipation of the different positions of various interest groups, so that their cooperation may be obtained, and so that possible attempts by any of these groups to curtail evaluation operations or to bias or misapply the results can be averted or counteracted.

F3 Cost Effectiveness--The evaluation should be efficient and produce information of sufficient value, so that the resources expended can be justified.

IX. Propriety Standards

The propriety standards are intended to ensure that an evaluation will be conducted legally, ethically, and with due regard for the welfare of those involved in the evaluation, as well as those affected by its results.

P1 Service Orientation--Evaluations should be designed to assist organizations to address and effectively serve the needs of the full range of targeted participants.

P2 Formal Agreements--Obligations of the formal parties to an evaluation (what is to be done, how, by whom, when) should be agreed to in writing, so that these parties are obligated to adhere to all conditions of the agreement or formally to renegotiate it.

P3 Rights of Human Subjects--Evaluations should be designed and conducted to respect and protect the rights and welfare of human subjects.

P4 Human Interactions--Evaluators should respect human dignity and worth in their interactions with other persons associated with an evaluation, so that participants are not threatened or harmed.

P5 Complete and Fair Assessment--The evaluation should be complete and fair in its examination and recording of strengths and weaknesses of the program being evaluated, so that strengths can be built upon and problem areas addressed.

P6 Disclosure of Findings--The formal parties to an evaluation should ensure that the full set of evaluation findings along with pertinent limitations are made accessible to the persons affected by the evaluation, and any others with expressed legal rights to receive the results.

P7 Conflict of Interest--Conflict of interest should be dealt with openly and honestly, so that it does not compromise the evaluation processes and results.

P8 Fiscal Responsibility--The evaluator's allocation and expenditure of resources should reflect sound accountability procedures and otherwise be prudent and ethically responsible, so that expenditures are accounted for and appropriate.

X. Accuracy Standards

The accuracy standards are intended to ensure that an evaluation will reveal and convey technically adequate information about the features that determine worth or merit of the program being evaluated.

A1 Program Documentation--The program being evaluated should be described and documented clearly and accurately, so that the program is clearly identified.

A2 Context Analysis--The context in which the program exists should be examined in enough detail, so that its likely influences on the program can be identified.

A3 Described Purposes and Procedures--The purposes and procedures of the evaluation should be monitored and described in enough detail, so that they can be identified and assessed.

A4 Defensible Information Sources--The sources of information used in a program evaluation should be described in enough detail, so that the adequacy of the information can be assessed.

A5 Valid Information--The information gathering procedures should be chosen or developed and then implemented so that they will assure that the interpretation arrived at is valid for the intended use.

A6 Reliable Information--The information gathering procedures should be chosen or developed and then implemented so that they will assure that the information obtained is sufficiently reliable for the intended use.

A7 Systematic Information--The information collected, processed, and reported in an evaluation should be systematically reviewed and any errors found should be corrected.

A8 Analysis of Quantitative Information--Quantitative information in an evaluation should be appropriately and systematically analyzed so that evaluation questions are effectively answered.

A9 Analysis of Qualitative Information--Qualitative information in an evaluation should be appropriately and systematically analyzed so that evaluation questions are effectively answered.

A10 Justified Conclusions--The conclusions reached in an evaluation should be explicitly justified, so that stakeholders can assess them.

A11 Impartial Reporting--Reporting procedures should guard against distortion caused by personal feelings and biases of any party to the evaluation, so that evaluation reports fairly reflect the evaluation findings.

A12 Metaevaluation--The evaluation itself should be formatively and summatively evaluated against these and other pertinent standards, so that its conduct is appropriately guided and, on completion, stakeholders can closely examine its strengths and weaknesses.

### Guiding Principles for Evaluators

A Report from the AEA Task Force on  
Guiding Principles for Evaluators  
Members of the Task Force

Dianna Newman, University of Albany/SUNY

Mary Ann Scheirer, Private Practice

William Shadish, Memphis State University (Chair),  
[w.shadish@mail.psync.memphis.edu](mailto:w.shadish@mail.psync.memphis.edu)

Chris Wye, National Academy of Public Administration

#### I. Introduction

A. **Background:** In 1986, the Evaluation Network (ENet) and the Evaluation Research Society (ERS) merged to create the American Evaluation Association. ERS had previously adopted a set of standards for program evaluation (published in New Directions for Program Evaluation in 1982); and both organizations had lent support to work of other organizations about evaluation guidelines. However, none of these standards or guidelines was officially adopted by AEA, nor were any other ethics, standards, or guiding principles put into place. Over the ensuing years, the need for such guiding principles has been discussed by both the AEA Board and the AEA membership. Under the presidency of David Cordray in 1992, the AEA Board appointed a temporary committee chaired by Peter Rossi to examine whether AEA should address this matter in more detail. That committee issued a report to the AEA Board on November 4, 1992, recommending that AEA should pursue this matter further. The Board followed that recommendation, and on that date created a Task Force to develop a draft of guiding principles for evaluators. The AEA Board specifically instructed the Task Force to develop general guiding principles rather than specific standards of practice. This report summarizes the Task Force's response to the charge.

B. **Process:** Task Force members reviewed relevant documents from other professional societies, and then independently prepared and circulated drafts of material for use in this report. Initial and subsequent drafts (compiled by the Task Force chair) were discussed during conference calls, with revisions occurring after each call. Progress reports were presented at every AEA board meeting during 1993. In addition, a draft of the guidelines was mailed to all AEA members in September 1993 requesting feedback; and three symposia at the 1993 AEA annual conference were used to discuss and obtain further feedback. The Task Force considered all this feedback in a December 1993 conference call, and prepared a final draft in January 1994. This draft was presented and approved for membership vote at the January 1994 AEA board meeting.

C. **Resulting Principles:** Given the diversity of interests and employment settings

represented on the Task Force, it is noteworthy that Task Force members reached substantial agreement about the following five principles. The order of these principles does not imply priority among them; priority will vary by situation and evaluator role.

1. **Systematic Inquiry:** Evaluators conduct systematic, data-based inquiries about whatever is being evaluated.
2. **Competence:** Evaluators provide competent performance to stakeholders.
3. **Integrity/Honesty:** Evaluators ensure the honesty and integrity of the entire evaluation process.
4. **Respect for People:** Evaluators respect the security, dignity and self-worth of the respondents, program participants, clients, and other stakeholders with whom they interact.
5. **Responsibilities for General and Public Welfare:** Evaluators articulate and take into account the diversity of interests and values that may be related to the general and public welfare.

These five principles are elaborated in Section III of this document.

D. **Recommendation for Continued Work:** The Task Force also recommends that the AEA Board establish and support a mechanism for the continued development and dissemination of these Guiding Principles.

#### II. Preface: Assumptions Concerning Development of Principles

A. Evaluation is a profession composed of persons with varying interests, potentially encompassing but not limited to the evaluation of programs, products, personnel, policy, performance, proposals, technology, research, theory, and even of evaluation itself. These principles are broadly intended to cover all kinds of evaluation.

B. Based on differences in training, experience, and work settings, the profession of evaluation encompasses diverse perceptions about the primary purpose of evaluation. These include but are not limited to the following: bettering products, personnel, programs, organizations, governments, consumers and the public interest; contributing to informed decision making and more enlightened change; precipitating needed change; empowering all stakeholders by collecting data from them and engaging them in the evaluation process; and experiencing the excitement of new insights. Despite that diversity, the common ground is that evaluators aspire to construct and provide the best possible information that might bear on the value of whatever is being evaluated. The principles are intended to foster that primary aim.

C. The intention of the Task Force was to articulate a set of principles that should guide the professional practice of evaluators, and that should inform evaluation clients and the general public about the principles they can expect to be upheld by professional evaluators. Of course, no statement of principles can anticipate all situations that arise in the practice of evaluation. However, principles are not just guidelines for reaction when something goes wrong or when a dilemma is found. Rather, principles should proactively guide the behaviors of professionals in everyday practice.

D. The purpose of documenting guiding principles is to foster continuing development of the profession of evaluation, and the socialization of its members. The principles are meant to stimulate discussion and to provide a language for dialogue about the proper practice and application of evaluation among members of the profession, sponsors of evaluation, and others interested in evaluation.

E. The five principles proposed in this document are not independent, but overlap in many ways. Conversely, sometimes these principles will conflict, so that evaluators will have to choose among them. At such times evaluators must use their own values and knowledge of the setting to determine the appropriate response. Whenever a course of action is unclear, evaluators should solicit the advice of fellow evaluators about how to resolve the problem before deciding how to proceed.

F. These principles are intended to replace any previous work on standards, principles,

or ethics adopted by ERS or ENet, the two predecessor organizations to AEA. These principles are the official position of AEA on these matters.

G. Each principle is illustrated by a number of statements to amplify the meaning of the overarching principle, and to provide guidance for its application. These statements are illustrations. They are not meant to include all possible applications of that principle, or to be viewed as rules that provide the basis for sanctioning violators.

H. These principles are not intended to be or to replace standards supported by evaluators or by the other disciplines in which evaluators participate. Specifically, AEA supports the effort to develop standards for educational evaluation by the Joint Committee on Standards for Educational Evaluation, of which AEA is a cosponsor.

I. These principles were developed in the context of Western cultures, particularly the United States, and so may reflect the experiences of that context. The relevance of these principles may vary across other cultures, and across subcultures within the United States.

J. These principles are part of an evolving process of self-examination by the profession, and should be revisited on a regular basis. Mechanisms might include officially-sponsored reviews of principles at annual meetings, and other forums for harvesting experience with the principles and their application. On a regular basis, but at least every five years from the date they initially take effect, these principles ought to be examined for possible review and revision. In order to maintain association-wide awareness and relevance, all AEA members are encouraged to participate in this process.

### III. The Principles

A. Systematic Inquiry: Evaluators conduct systematic, data-based inquiries about whatever is being evaluated.

1. Evaluators should adhere to the highest appropriate technical standards in conducting their work, whether that work is quantitative or qualitative in nature, so as to increase the accuracy and credibility of the evaluative information they produce.

2. Evaluators should explore with the client the shortcomings and strengths both of the various evaluation questions it might be productive to ask, and the various approaches that might be used for answering those questions.

3. When presenting their work, evaluators should communicate their methods and approaches accurately and in sufficient detail to allow others to understand, interpret and critique their work. They should make clear the limitations of an evaluation and its results. Evaluators should discuss in a contextually appropriate way those values, assumptions, theories, methods, results, and analyses that significantly affect the interpretation of the evaluative findings. These statements apply to all aspects of the evaluation, from its initial conceptualization to the eventual use of findings.

B. Competence: Evaluators provide competent performance to stakeholders.

1. Evaluators should possess (or, here and elsewhere as appropriate, ensure that the evaluation team possesses) the education, abilities, skills and experience appropriate to undertake the tasks proposed in the evaluation.

2. Evaluators should practice within the limits of their professional training and competence, and should decline to conduct evaluations that fall substantially outside those limits. When declining the commission or request is not feasible or appropriate, evaluators should make clear any significant limitations on the evaluation that might result. Evaluators should make every effort to gain the competence directly or through the assistance of others who possess the required expertise.

3. Evaluators should continually seek to maintain and improve their competencies, in order to provide the highest level of performance in their evaluations. This continuing professional development might include formal coursework and workshops, self-study, evaluations of one's own practice, and working with other evaluators to learn from their

skills and expertise.

C. Integrity/Honesty: Evaluators ensure the honesty and integrity of the entire evaluation process.

1. Evaluators should negotiate honestly with clients and relevant stakeholders concerning the costs, tasks to be undertaken, limitations of methodology, scope of results likely to be obtained, and uses of data resulting from a specific evaluation. It is primarily the evaluator's responsibility to initiate discussion and clarification of these matters, not the client's.

2. Evaluators should record all changes made in the originally negotiated project plans, and the reasons why the changes were made. If those changes would significantly affect the scope and likely results of the evaluation, the evaluator should inform the client and other important stakeholders in a timely fashion (barring good reason to the contrary, before proceeding with further work) of the changes and their likely impact.

3. Evaluators should seek to determine, and where appropriate be explicit about, their own, their clients', and other stakeholders' interests concerning the conduct and outcomes of an evaluation (including financial, political and career interests).

4. Evaluators should disclose any roles or relationships they have concerning whatever is being evaluated that might pose a significant conflict of interest with their role as an evaluator. Any such conflict should be mentioned in reports of the evaluation results.

5. Evaluators should not misrepresent their procedures, data or findings. Within reasonable limits, they should attempt to prevent or correct any substantial misuses of their work by others.

6. If evaluators determine that certain procedures or activities seem likely to produce misleading evaluative information or conclusions, they have the responsibility to communicate their concerns, and the reasons for them, to the client (the one who funds or requests the evaluation). If discussions with the client do not resolve these concerns, so that a misleading evaluation is then implemented, the evaluator may legitimately decline to conduct the evaluation if that is feasible and appropriate. If not, the evaluator should consult colleagues or relevant stakeholders about other proper ways to proceed (options might include, but are not limited to, discussions at a higher level, a dissenting cover letter or appendix, or refusal to sign the final document).

7. Barring compelling reason to the contrary, evaluators should disclose all sources of financial support for an evaluation, and the source of the request for the evaluation.

D. Respect for People: Evaluators respect the security, dignity and self-worth of the respondents, program participants, clients, and other stakeholders with whom they interact.

1. Where applicable, evaluators must abide by current professional ethics and standards regarding risks, harms, and burdens that might be engendered to those participating in the evaluation; regarding informed consent for participation in evaluation; and regarding informing participants about the scope and limits of confidentiality. Examples of such standards include federal regulations about protection of human subjects, or the ethical principles of such associations as the American Anthropological Association, the American Educational Research Association, or the American Psychological Association. Although this principle is not intended to extend the applicability of such ethics and standards beyond their current scope, evaluators should abide by them where it is feasible and desirable to do so.

2. Because justified negative or critical conclusions from an evaluation must be explicitly stated, evaluations sometimes produce results that harm client or stakeholder interests. Under this circumstance, evaluators should seek to maximize the benefits and reduce any unnecessary harm that might occur, provided this will not compromise the integrity of the evaluation findings. Evaluators should carefully judge when the benefits from doing the evaluation or in performing certain evaluation

procedures should be foregone because of the risks or harms. Where possible, these issues should be anticipated during the negotiation of the evaluation.

3. Knowing that evaluations often will negatively affect the interests of some stakeholders, evaluators should conduct the evaluation and communicate its results in a way that clearly respects the stakeholders' dignity and self-worth.

4. Where feasible, evaluators should attempt to foster the social equity of the evaluation, so that those who give to the evaluation can receive some benefits in return. For example, evaluators should seek to ensure that those who bear the burdens of contributing data and incurring any risks are doing so willingly, and that they have full knowledge of, and maximum feasible opportunity to obtain any benefits that may be produced from the evaluation. When it would not endanger the integrity of the evaluation, respondents or program participants should be informed if and how they can receive services to which they are otherwise entitled without participating in the evaluation.

5. Evaluators have the responsibility to identify and respect differences among participants, such as differences in their culture, religion, gender, disability, age, sexual orientation and ethnicity, and to be mindful of potential implications of these differences when planning, conducting, analyzing, and reporting their evaluations.

E. Responsibilities for General and Public Welfare: Evaluators articulate and take into account the diversity of interests and values that may be related to the general and public welfare.

1. When planning and reporting evaluations, evaluators should consider including important perspectives and interests of the full range of stakeholders in the object being evaluated. Evaluators should carefully consider the justification when omitting important value perspectives or the views of important groups.

2. Evaluators should consider not only the immediate operations and outcomes of whatever is being evaluated, but also the broad assumptions, implications and potential side effects of it.

3. Freedom of information is essential in a democracy. Hence, barring compelling reason to the contrary, evaluators should allow all relevant stakeholders to have access to evaluative information, and should actively disseminate that information to stakeholders if resources allow. If different evaluation results are communicated in forms that are tailored to the interests of different stakeholders, those communications should ensure that each stakeholder group is aware of the existence of the other communications. Communications that are tailored to a given stakeholder should always include all important results that may bear on interests of that stakeholder. In all cases, evaluators should strive to present results as clearly and simply as accuracy allows so that clients and other stakeholders can easily understand the evaluation process and results.

4. Evaluators should maintain a balance between client needs and other needs. Evaluators necessarily have a special relationship with the client who funds or requests the evaluation. By virtue of that relationship, evaluators must strive to meet legitimate client needs whenever it is feasible and appropriate to do so. However, that relationship can also place evaluators in difficult dilemmas when client interests conflict with other interests, or when client interests conflict with the obligation of evaluators for systematic inquiry, competence, integrity, and respect for people. In these cases, evaluators should explicitly identify and discuss the conflicts with the client and relevant stakeholders, resolve them when possible, determine whether continued work on the evaluation is advisable if the conflicts cannot be resolved, and make clear any significant limitations on the evaluation that might result if the conflict is not resolved.

5. Evaluators have obligations that encompass the public interest and good. These obligations are especially important when evaluators are supported by

publicly-generated funds; but clear threats to the public good should never be ignored in any evaluation. Because the public interest and good are rarely the same as the interests of any particular group (including those of the client or funding agency), evaluators will usually have to go beyond an analysis of particular stakeholder interests when considering the welfare of society as a whole.

## APPENDIX C

### FIELD STUDY OPTIONS

Students are required to conduct one field-based mini-evaluation study during the semester. The field-based study may be associated with the Professor's external evaluation projects or a project of the students' own choice. The mini-evaluation may be involve a addressing the answers to the subset of evaluation questions from the following options:

- A. **Needs Assessment:** *Is there a need for the program?* Students may seek to find evidence that the program is indeed meeting a social need. Can the resources and money involved be justified on the basis of meeting a social need? Methods of investigation include conducting literature searches, conducting focus group interviews, individual interviews, surveys, and content analysis of program documents.
- B. **Evaluability Assessment:** *Has the program sufficiently matured to the point that a formal evaluation is justified or possible?* For example, is everyone on the same page as to what the purpose of the program is? What are the objectives and expected outcomes of the program? Are they expressed in terms that are amenable to observation and measurement? Are there methods and tools available to reliably measure the objectives and expected outcomes? Do actual program actions, policies, and procedures correspond to intended plans? Students may select any subset of these questions (or others that they propose) to conduct their evaluability study.
- C. **Program Theory:** *What are the tacit assumptions expressed by program planners and staff about the connections between their actions and intended short-term and long-term outcomes?* What external resources are assumed to be supportive of program actions, activities, and intended outcomes? What is the logic model that reflects these connections?
- D. **Formative or Process Evaluation:** *What is going on in the program, and how can program features be improved?* How can we substantiate that program activities are carried out as planned (program fidelity study)? Are there program elements not functioning as planned? Why? What can be done to overcome the barriers? Are program targets being met in the fashion and time frame that was planned?
- E. **Proposed Summative Evaluation:** *What plan can be devised to assess whether the program has met its short-term outcome objectives?*
